

ENGINEERING PRACTICE STUDY

TITLE: Transformers and Inductors, Non-Explosive, General Specification

12 July 2024

PROJECT NUMBER
5950-2024-025

FINAL REPORT

Study Conducted and
Prepared by:

Ami Banks

- I. OBJECTIVES. The objective of this study is to determine whether it is advisable to recommend cancelation of MIL-T-83720, /8 and /13.
- II. BACKGROUND. The above documents have been inactive for new design since 1999. These documents are 56 years old. The Quantity of Stock on Hand for NSN - 5950001425718 is 5 items with little to no change in 5+ years. The other NSNs have 0 Stock on Hand. There has been no procurement of these items since 2009. There appears to be no demand for these items. All MIL-T-83720 slash sheets, except /8 and /13, have been canceled.
- III. RESULTS. The documents were reviewed, and a DoD position determined on each. One comment was generated and is provided as an attachment. Comment was concurrence for cancelation of documents.
- IV. CONCLUSIONS. The analysis of comments and engineering evaluation showed that the subject documents are not needed and should be canceled.
- V. RECOMMENDATIONS. Documents, MIL-T-83720, /8, and /13, are no longer needed and DLA has concurrence for cancelation of these documents. Recommend issuing Cancelation Notices for documents.
