

ENGINEERING PRACTICE STUDY

IDENTIFY/CORRECT OMISSIONS OR MISTAKES IN THE CHANGES
INTRODUCED DURING MIL-STD-1580 REV D.

12 June 2026

PROJECT NUMBER 59GP-2026-003

FINAL REPORT

Prepared by:
Ami Banks
Electronics Engineer
VAT Branch, Standardization
Engineering and Technical Support
DLA Weapons Support Columbus

I. OBJECTIVES: Limited scope Engineering Practice Study to identify omissions and mistakes introduced during MIL-STD-1580D coordination, December 2024. If an analysis of the responses shows a need, a project will be taken to correct the document. No unrelated feedback will be used for the resulting follow-up project.

II. BACKGROUND: The last revision of MIL-STD-1580D was published December 2024. Later it was discovered that there were several typos and omissions. CE-11 member feedback and an engineering evaluation led to this EP Study effort to clean-up and correct these items. All comments were checked to assure they meet the project scope. (This was a CE-11 task# 25-301)

III. RESULTS: A review of MIL-STD-1580D stakeholder feedback (from CE-11 members and others) was performed. The response to this study was over 28 comments that were within scope of the study. These results validated the need for the study and follow-up revision of the document.

IV. CONCLUSIONS: It's necessary to clean up the document to assure it meets the requirements of MIL-STD-961, as well as the DoD & DLA Standardization program, and the services. The scope of the resulting MIL-STD-1580 change notice project will be limited to corrections and will not include changes or proposals related to new technical data or testing.

V. RECOMMENDATION: Recommend a project to clean up and correct the 28+ typos and mistakes found in this study. The scope of the project will be limited to corrections and will not include anything beyond corrections.
