

INCH-POUND

MIL-M-38510/61C

15 June 2004

SUPERSEDING

MIL-M-38510/61B

15 July 1985

MILITARY SPECIFICATION
MICROCIRCUITS, DIGITAL, ECL, FLIP-FLOPS,
MONOLITHIC SILICON

Inactive for new design after 6 September 1996.

This specification is approved for use by all Departments
and Agencies of the Department of Defense.

The requirements for acquiring the product herein shall consist of this specification sheet and MIL-PRF 38535

1. SCOPE

1.1 Scope. This specification covers the detail requirements for monolithic silicon, ECL, logic gating microcircuits. Two product assurance classes and a choice of case outlines and lead finishes are provided for each type and are reflected in the complete part number. For this product, the requirements of MIL-M-38510 have been superseded by MIL-PRF-38535, (see 6.3).

1.2 Part or Identifying Number (PIN). The PIN is in accordance with MIL-PRF-38535, and as specified herein.

1.2.1 Device types. The device types are as follows:

<u>Device type</u>	<u>Circuit</u>
01	Dual D-type flip flop with preset and clear
02	Dual D-type flip flop with preset and clear
03	Hex D-type flip flop
04	Dual J-K flip flop with preset and clear

1.2.2 Device class. The device class is the product assurance level as defined in MIL-PRF-38535.

1.2.3 Case outlines. The case outlines are as designated in MIL-STD-1835 and as follows:

<u>Outline letter</u>	<u>Descriptive designator</u>	<u>Terminals</u>	<u>Package style</u>
E	GDIP1-T16 or CDIP2-T16	16	Dual-in-line
F	GDFP2-F16 or CDFP3-F16	16	Flat
2	CQCC1-N20	20	Square chip carrier

Comments, suggestions, or questions on this document should be addressed to: Commander, Defense Supply Center Columbus, ATTN: DSCC-VAS, 3990 East Broad St., Columbus, OH 43218-3990, or emailed to bipolar@dsccl.dla.mil. Since contact information can change, you may want to verify the currency of this address information using the ASSIST Online database at www.dodssp.daps.mil.

1.3 Absolute maximum ratings.

Supply voltage range	0 V to -7.0 V
Input voltage range	0 V to V_{EE} (most negative power supply voltage)
Storage temperature range	-65° to +150°C
Maximum power dissipation, (P_D) <u>1/</u>	
Device type 01	165 mW
Device type 02	190 mW
Device type 03	105 mW
Device type 04	200 mW
Lead temperature (soldering, 10 seconds)	+260°C
Junction temperature (T_J) <u>2/</u>	165°C
Maximum output current	-50 mA
Thermal resistance, junction to case (θ_{JC}):	
Cases E, F and 2	(See MIL-STD-1835)

1.4 Recommended operating conditions.

Supply voltage (V_{EE})	-5.46 V minimum to -4.94 V maximum
Minimum high level input voltage (V_{IH})	-1.105 V at $T_C = 25^\circ\text{C}$
(at 500 linear feet per minute) (ft/min)	-1.000 V at $T_C = 125^\circ\text{C}$
.....	-1.255 V at $T_C = -55^\circ\text{C}$
Maximum low level input voltage (V_{IL})	-1.475 V at $T_C = 25^\circ\text{C}$
(at 500 linear ft/min)	-1.400 V at $T_C = 125^\circ\text{C}$
.....	-1.510 V at $T_C = -55^\circ\text{C}$
Normalized fanout (each output)	10 <u>3/</u>
Case operating temperature range (T_C) (at 500 linear ft/min).....	-55° to +125°C
Case operating temperature (at still air)	
Device types 01, 02, 04 (cases E and F):	-55° to +125°C
Device type 03:	
(case E)	-55° to +100°C
(case F)	-55° to +110°C
Input data setup time, (t_{SETUP})	
Device type 01	2.5 ns minimum
Device type 02	1.0 ns minimum
Device type 03	2.5 ns minimum
Device type 04	2.5 ns minimum
Input data hold time, (t_{HOLD})	
Device type 01	1.5 ns minimum
Device type 02	0.75 ns minimum
Device type 03	1.5 ns minimum
Device type 04	1.5 ns minimum

1/ Must withstand the added P_D due to short-circuit test (e.g., I_{OS}).2/ Maximum junction temperature should not be exceeded except in accordance with allowable short duration burn-in screening condition in accordance with MIL-PRF-38535.3/ Device will fanout in both high and low levels to the specified number of data inputs on the same device type as that being tested.

2. APPLICABLE DOCUMENTS

2.1 General. The documents listed in this section are specified in sections 3, 4, or 5 of this specification. This section does not include documents cited in other sections of this specification or recommended for additional information or as examples. While every effort has been made to ensure the completeness of this list, document users are cautioned that they must meet all specified requirements of documents cited in sections 3, 4, or 5 of this specification, whether or not they are listed.

2.2 Government documents.

2.2.1 Specifications and Standards. The following specifications and standards form a part of this specification to the extent specified herein. Unless otherwise specified, the issues of these documents are those cited in the solicitation or contract.

DEPARTMENT OF DEFENSE SPECIFICATIONS

MIL-PRF-38535 - Integrated Circuits (Microcircuits) Manufacturing, General Specification for.

DEPARTMENT OF DEFENSE STANDARDS

MIL-STD-883 - Test Method Standard for Microelectronics.
MIL-STD-1835 - Interface Standard Electronic Component Case Outlines

(Copies of these documents are available online at <http://assist.daps.dla.mil/quicksearch/> or www.dodssp.daps.mil or from the Standardization Document Order Desk, 700 Robbins Avenue, Building 4D, Philadelphia, PA 19111-5094.)

2.3 Order of precedence. In the event of a conflict between the text of this specification and the references cited herein, the text of this document takes precedence. Nothing in this document, however, supersedes applicable laws and regulations unless a specific exemption has been obtained.

3. REQUIREMENTS

3.1 Qualification. Microcircuits furnished under this specification shall be products that are manufactured by a manufacturer authorized by the qualifying activity for listing on the applicable qualified manufacturers list before contract award (see 4.3 and 6.4).

3.2 Item requirements. The individual item requirements shall be in accordance with MIL-PRF-38535 and as specified herein or as modified in the device manufacturer's Quality Management (QM) plan. The modification in the QM plan shall not affect the form, fit, or function as described herein.

3.3 Design, construction, and physical dimensions. The design, construction, and physical dimensions shall be as specified in MIL-PRF-38535 and herein.

3.3.1 Terminal connections and logic diagrams. The terminal connections and logic diagrams shall be as specified on figure 1.

3.3.2 Truth tables and logic equations. The truth tables and logic equations shall be as specified on figure 2.

3.3.3 Schematic circuits. The schematic circuits shall be maintained by the manufacturer and made available to the qualifying activity and the preparing activity upon request.

TABLE I. Electrical performance characteristics.

Test	Symbol	Conditions				Device types	Limits		Unit
		-55°C ≤ T _C ≤ +125°C 1/					Min	Max	
High level output voltage	V _{OH}	V _{EE} = -5.2 V, V _{CC} = 0 V, Load = 100Ω to -2V	T _C	V _{IH1}	V _{IL1}	All	-0.930 -0.825 -1.080	-0.780 -0.630 -0.880	V

		02	1.2	3.9		
		03	1.3	5.3		
		04	1.0	5.3		

1/ Limits are valid provided circuit is in a test socket and transverse air flow of 500 linear ft/min is maintained.

TABLE II. Electrical test requirements.

MIL-PRF-38535 test requirements	Subgroups (see table III)	
	Class S devices	Class B devices
Interim electrical parameters	1	1
Final electrical test parameters	1*, 2, 3, 9	1*, 2, 3, 9
Group A test requirements	1, 2, 3, 9, 10, 11	1, 2, 3, 9, 10, 11
Group B electrical test parameters when using the method 5005 QCI option	1, 2, 3	N/A
Group C end-point electrical parameters	1, 2, 3	1, 2, 3
Group D end-point electrical parameters	1, 2, 3	1, 2, 3

*PDA applies to subgroup 1.

4. VERIFICATION

4.1 Sampling and inspection. Sampling and inspection procedures shall be in accordance with MIL-PRF-38535 or as modified in the device manufacturer's Quality Management (QM) plan. The modification in the QM plan shall not effect the form, fit, or function as described herein.

4.2 Screening. Screening shall be in accordance with MIL-PRF-38535 and shall be conducted on all devices prior to qualification and quality conformance inspection. The following additional criteria shall apply:

- a. The burn-in test duration, test condition, and test temperature, or approved alternatives shall be as specified in the device manufacturer's QM plan in accordance with MIL-PRF-38535. The burn-in test circuit shall be maintained under document control by the device manufacturer's Technology Review Board (TRB) in accordance with MIL-PRF-38535 and shall be made available to the acquiring or preparing activity upon request. The test circuit shall specify the inputs, outputs, biases, and power dissipation, as applicable, in accordance with the intent specified in test method 1015 of MIL-STD-883.
- b. Interim and final electrical test parameters shall be as specified in table II, except interim electrical parameters test prior to burn-in is optional at the discretion of the manufacturer.
- c. Additional screening for space level product shall be as specified in MIL-PRF-38535.

4.3 Qualification inspection. Qualification inspection shall be in accordance with MIL-PRF-38535.

4.4 Technology Conformance inspection (TCI). Technology conformance inspection shall be in accordance with MIL-PRF-38535 and herein for groups A, B, C, and D inspections (see 4.4.1 through 4.4.4).

4.4.1 Group A inspection. Group A inspection shall be in accordance with table III of MIL-PRF-38535 and as follows:

a. Tests shall be as specified in table II herein.

b. Subgroups 4, 5, 6, 7, and 8 shall be omitted.

4.4.2 Group B inspection. Group B inspection shall be in accordance with table II MIL-PRF-38535.

4.4.3 Group C inspection. Group C inspection shall be in accordance with table IV of MIL-PRF-38535 and as follows:

a. End-point electrical parameters shall be as specified in table II herein.

b. The steady-state life test duration, test condition, and test temperature, or approved alternatives shall be as specified in the device manufacturer's QM plan in accordance with MIL-PRF-38535. The burn-in test circuit shall be maintained under document control by the device manufacturer's Technology Review Board (TRB) in accordance with MIL-PRF-38535 and shall be made available to the acquiring or preparing activity upon request. The test circuit shall specify the inputs, outputs, biases, and power dissipation, as applicable, in accordance with the intent specified in test method 1005 of MIL-STD-883.

4.4.4 Group D inspection. Group D inspection shall be in accordance with table V of MIL-PRF-38535. End-point electrical parameters shall be as specified in table II herein.

4.5 Methods of inspection. Methods of inspection shall be as specified and as follows:

4.5.1 Voltage and current. All voltages given are referenced to the microcircuit ground terminal. Currents given are conventional and positive when flowing into the referenced terminal.

TABLE IIIA. Test conditions for all devices, group A inspection

Symbol	V_{IH1} (V)	V_{IH2} (V)	V_{IL2} (V)	V_{TTL} (V)	V_{TH} (V)	A	B	C	D	E

FIGURE 1. Terminal connections and logic diagrams - Continued.

FIGURE 1. Terminal connections and logic diagrams - Continued.

Device types 01 and 02

ASYNCHRONOUS			
CLR	P/S	Q	$\bar{Q}$
L	L	Q	$\bar{Q}$
L	H	H	L
H	L	L	H
H	H	H*	H*

- * This is an unstable condition, when clear (CLR) and preset (P/S) inputs return to their low level (inactive state) these states will not be maintained.

SYNCHRONOUS		
C	D	Q_{n+1}
L	X	Q_n
H*	L	L
H*	H	H

X = Don't care

$$C = \bar{C}_E + C_C$$

*A clock H is a clock transition transition from a low to a high state.

Preset (P/S) and clear (CLR) override clock (CC) and clock enable (CE) inputs. Each flip-flop may be clocked separately by holding the common clock in the low state and using the enable inputs for the clocking function. If the common clock is to be used to clock the flip-flop, the clock enable inputs must be in the low state. In this case, the enable inputs perform the function of controlling the common clock. The outputs states of the flip-flop change on the positive transition of the clock.

Device type 03
SYNCHRONOUS

C	D	Q_{n+1}
L	X	Q_n
H*	L	L
H*	H	H

X = Don't care

*A clock H is a clock transition transition from a low to a high state.

Clocking is common to all six flip-flops. Data transfer is accomplished on positive going transition of the clock.

Device type 04

ASYNCHRONOUS			
CLR	P/S	Q	$\bar{Q}$
L	L	Q	$\bar{Q}$
L	H	H	L
H	L	L	H
H	H	H*	H*

- * This is an unstable condition, when clear (CLR) and preset (P/S) inputs return to their low level (inactive state) these states will not be maintained.

SYNCHRONOUS		
$\bar{J}$	$\bar{K}$	Q_{n+1}
L	L	$\bar{Q}_n$
H	L	L
L	H	H
H	H	Q_n

Output states change on positive transition of clock for $\bar{J} - \bar{K}$ input conditions present.

Preset (P/S) and clear (CLR) override the clock. The output states of the flip-flop change on the positive transition of the clock.

 $t_{THL} = 2.0$ ns (20%-80%)
 $t_{TLH} = 2.0$ ns (20%-80%)
 t_P (data) = 150 ns
 t_P (clock) = 40 ns
 PRR = 1 MHz

$$\frac{R_L}{2} = 50\Omega \pm 5\%$$

SCOPE INPUT = 50Ω to GND

C_L (test jig) ≤ 5 pF

NOTES:

1. Perform test in accordance with test table; each output is tested separately.
2. All input and output cables are equal lengths of 50 ohm coaxial cables. Wire length should be $\leq .250$ (6.35 mm) from t_P in to input pin and t_P out to output pin.
3. Outputs not under test connected to a 100 ohm resistor to ground.
4. Note that observed pulse amplitude is attenuated by one half.

5. PACKAGING

5.1 Packaging requirements. For acquisition purposes, the packaging requirements shall be as specified in the contract or order (see 6.2). When actual packaging of materiel is to be performed by DoD or in-house contractor personnel, these personnel need to contact the responsible packaging activity to ascertain packaging requirements. Packaging requirements are maintained by the Inventory Control Point's packaging activity within the Military Service or Defense Agency, or within the military service's system command. Packaging data retrieval is available from the managing Military Department's or Defense Agency's automated packaging files, CD-ROM products, or by contacting the responsible packaging activity.

6. NOTES

6.1 Intended use. Microcircuits conforming to this specification are intended for original equipment design applications and logistic support of existing equipment.

6.2 Acquisition requirements. Acquisition documents should specify the following:

- a. Title, number, and date of the specification.
- b. PIN and compliance identifier, if applicable (see 1.2).
- c. Requirements for delivery of one copy of the conformance inspection data pertinent to the device inspection lot to be supplied with each shipment by the device manufacturer, if applicable.
- d. Requirements for certificate of compliance, if applicable.
- e. Requirements for notification of change of product or process to contracting activity in addition to notification to the qualifying activity, if applicable.
- f. Requirements for failure analysis (including required test condition of method 5003 of MIL-STD-883), corrective action, and reporting of results, if applicable.
- g. Requirements for product assurance options.
- h. Requirements for special carriers, lead lengths, or lead forming, if applicable. These requirements should not affect the part number. Unless otherwise specified, these requirements will not apply to direct purchase by or direct shipment to the Government.
- i. Requirements for "JAN" marking.
- J. Packaging requirements (see 5.1).

6.3 Superseding information. The requirements of MIL-M-38510 have been superseded to take advantage of the available Qualified Manufacturer Listing (QML) system provided by MIL-PRF-38535. Previous references to MIL-M-38510 in this document have been replaced by appropriate references to MIL-PRF-38535. All technical requirements now consist of this specification and MIL-PRF-38535. The MIL-M-38510 specification sheet number and PIN have been retained to avoid adversely impacting existing government logistics systems and contractor's parts lists.

6.4 Qualification. With respect to products requiring qualification, awards will be made only for products which are, at the time of award of contract, qualified for inclusion in Qualified Manufacturers List QML-38535 whether or not such products have actually been so listed by that date. The attention of the contractors is called to these requirements, and manufacturers are urged to arrange to have the products that they propose to offer to the Federal Government tested for qualification in order that they may be eligible to be awarded contracts or purchase orders for the products covered by this specification. Information pertaining to qualification of products may be obtained from DSCC-VQ, 3990 E. Broad Street, Columbus, Ohio 43123-1199.

\

6.5 Abbreviations, symbols, and definitions. The abbreviations, symbols, and definitions used herein are defined in MIL-PRF-38535, MIL-HDBK-1331, and as follows:

GND	Ground zero voltage potential
V _{OTH}	High-level threshold output voltage
V _{OTL}	Low-level threshold output voltage
V _{ITH}	High-level threshold input voltage
V _{ITL}	Low-level threshold input voltage
V _{EEL}	Shifted power supply voltage for the purpose of ac testing
T _J	Circuit junction temperature
T _C	Case operating temperature
P _D	Circuit power dissipation
θ _{JC}	Junction to case thermal resistance

6.6 Logistic support. Lead materials and finishes (see 3.3) are interchangeable. Unless otherwise specified, microcircuits acquired for Government logistic support will be acquired to device class B (see 1.2.2), lead material and finish A (see 3.3). Longer length leads and lead forming should not affect the part number.

6.7 Substitutability. The cross-reference information below is presented for the convenience of users. Microcircuits covered by this specification will functionally replace the listed generic-industry type. Generic-industry microcircuit types may not have equivalent operational performance characteristics across military temperature ranges or reliability factors equivalent to MIL-M-38510 device types and may have slight physical variations in relation to case size. The presence of this information should not be deemed as permitting substitution of generic-industry types for MIL-M-38510 types or as a waiver of any of the provisions of MIL-PRF-38535.

Military device type	Generic-industry type
01	10531
02	10631
03	10576
04	10535

6.8 Test limit compensation examples.

a. A device which has a power dissipation of 100 mW in case F is to be tested under a zero airflow condition. on figure 15, ΔT_J between 500 linear ft/min and zero airflow is +4°C. In order to adjust the various parameter limits, use figure 16 which defines the limit adjustment coefficients for ΔT_J. To adjust V_{OH}(max) at -55°C, use the +ΔT_J column of the -55°C portion of figure 16 and locate the coefficient corresponding to V_{OH}(max). This value is 1.25 mV/°C. Multiply the ΔT_J by the coefficient and algebraically add it to the -55°C V_{OH}(max) limit from table III.

$$\begin{aligned}
 V_{OH}(\text{max}) (\text{adjusted limit}) &= (+4^{\circ}\text{C}) \times (1.25 \text{ mV}/^{\circ}\text{C}) + (-880 \text{ mV}) \\
 &= 5 \text{ mV} - 880 \text{ mV} = -875 \text{ mV} \\
 &\text{Use } -875 \text{ mV}
 \end{aligned}$$

Follow the same procedure to adjust the remaining parameters at -55°C as well as all parameters at 25°C and 125°C.

b. A device with a power dissipation of 150 mW in case E is to be tested at an airflow of 200 linear ft/min and the 25°C testing is to be accomplished at an ambient temperature of +20°C. On figure 14 ΔT_J due to airflow is +3°C. The ΔT_J due to ambient temperature change is -5°C (25-20). Therefore the total ΔT_J = -5 + 3 = -2°C. Using figure 16 find the 25°C, -ΔT_J column. To adjust the V_{OL} (max) for a negative ΔT_J, this value is 0.44 mV/°C. Multiply the ΔT_J by the coefficient and algebraically add it to the +25°C V_{OL} (max) limit from table III.

$$\begin{aligned}
 V_{OL} (\text{max}) (\text{adjusted limit}) &= (-2^{\circ}\text{C}) \times (0.44 \text{ mV}/^{\circ}\text{C}) + (-1620 \text{ mV}) \\
 &= -.88 \text{ mV} - 1620 \text{ mV} = -1620.88 \text{ mV} \\
 &\text{Use } -1621 \text{ mV}
 \end{aligned}$$

Follow the same procedure to adjust the remaining parameters at +25°C.

6.9 Changes from previous issue. Marginal notations are not used in this revision to identify changes with respect to the previous issue due to the extensiveness of the changes.
