

DLA Land and Maritime - VQ
Supplemental Information Sheet for Electronic QPL-10509

Date: 11/30/2011

Specification Details:

Specification: MIL-R-10509
Title: Resistor, Fixed, Film (High Stability)
Federal Supply Class (FSC): 5905
Conventional: Yes
Specification contains quality assurance program: No
MIL-STD-790 Established Reliability & High Reliability: No
MIL-STD-690 Failure Rate Sampling Plans & Procedures: No
Weibull Graded: No
Specification contains space level reliability requirements: No
Specification allows test optimization: No

Notes:

Effective 21 April 1994, MIL-R-10509 has been declared "Inactive for New Design." For new design, use MIL-PRF-55182. This is applicable on all acquisitions to which MIL-R-10509 is applied.

PIN: The PIN consists of the Style, Characteristic, Resistance, and Resistance Tolerance.

Style: The style is identified by the two letter symbol "RN" followed by a two digit number; the letters identify high stability, film, fixed resistors, and the number identifies the size of the resistors.

Characteristic: The characteristic is identified by a single letter.

Resistance: The nominal resistance expressed in ohms is identified by four digits: The first three digits represent significant figures and the last digit specifies the number of zeros to follow. When the value of resistance is less than 100 ohms, or when fractional values of an ohm are required, the letter "R" is substituted for one of the significant digits to represent the decimal point. When the letter "R" is used, succeeding digits of the group represent significant figures.

Resistance tolerance: The resistance tolerance is identified by a single letter.
