Notes:

This listing of discrete semiconductors applies only to products produced on the MIL-PRF-19500 certified/approved line(s) at the plant(s) listed at the back of the QML for the applicable manufacturer. The number in parenthesis next to some manufacturers' listings correlates to the plant(s) listed for the manufacturer. Therefore, only those products that have been fabricated, assembled, and tested on the certified/qualified lines herein can be supplied as qualified products.

The parts listing indicates the certification/approval status for each manufacturer. This can be found in the "Certification Status" column which accompanies each part listing. There are four possible certification/approval options. The following list identifies each certification/approval option and the abbreviation used in this listing:

C - Certification to the Quality Management Program outlined in Appendix C
TC - Transitional Certification to the Quality Management Program outlined in Appendix C
D - Certification to the Quality Program of Appendix D
DMS - Approval to the Diminishing Manufacturing Sources (DMS) provisions in MIL-PRF-19500

In addition to the options for certification there are two levels of certification; JAN, JANTX, JANTXV certification and JANS certification. The transitional certification to Appendix C option is for manufacturers in the process of making the transition from their previously certified Appendix D certification to an Appendix C certification. Manufacturers not able to comply with the certification requirements of either appendix C or D may be granted a DMS approval. DMS approvals are intended to provide a qualified source of supply for difficult procurement situations. Please refer to the latest revision of MIL-PRF-19500 for details.

MIL-PRF-19500 Appendix C contains provisions for test optimization for all listed processes and products for all device classes. Under these provisions traditional screens and Conformance Inspections (CI) can be optimized if found to be non-value added through the manufacturers up front controls and monitors in the wafer fabrication, assembly, and test areas as well as by design. Optimization of these screens and inspections in no way adversely affects the devices' military form, fit, and function. Regardless of screening or CI testing optimization, the manufacturer is still responsible for supplying products capable of passing any screening or CI tests prescribed in MIL-PRF-19500 and in the performance specification sheet.
